**What is the newest**

01 We have a road ahead leading us to a sustainable world, let us cherish hope, passion, and love for a better future.

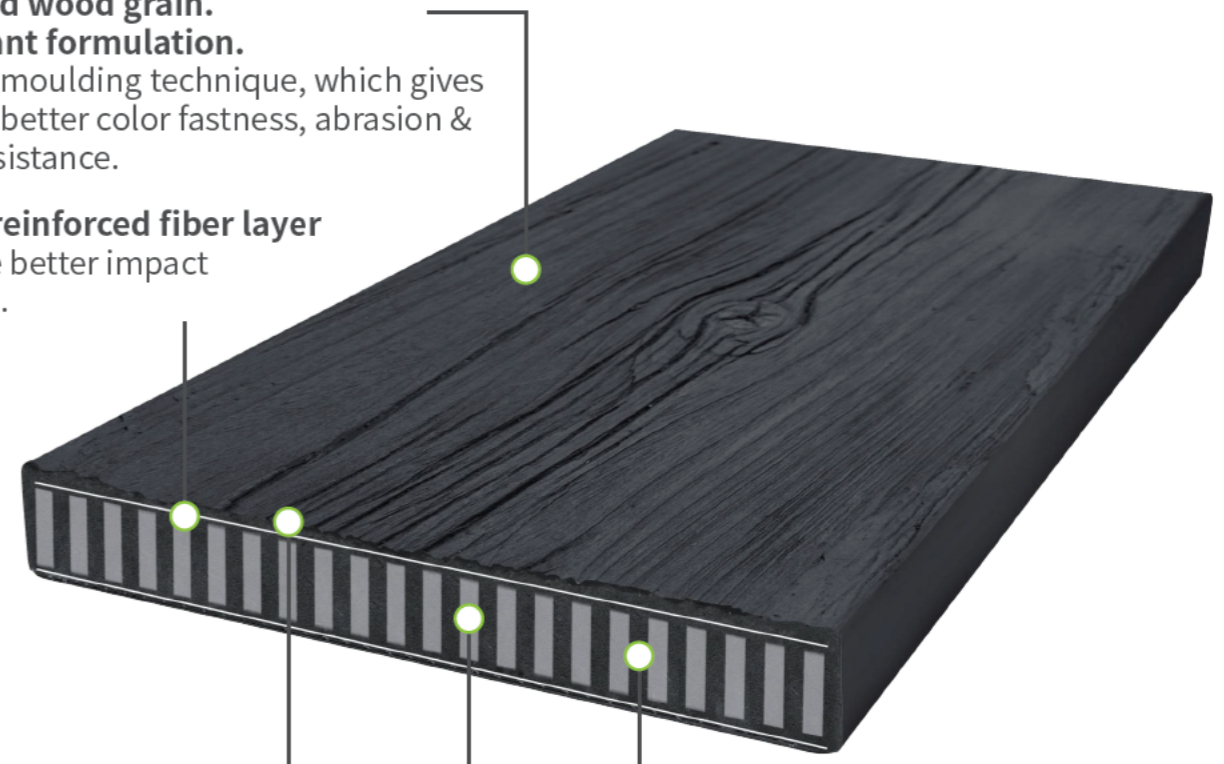

# Why RSF Board?

Welltouch Board brings distinctive wood patterns and reliable durability. It's a challenger, and it's the future.

**Weathered wood grain.**  
**UV resistant formulation.**  
 All-in-one moulding technique, which gives the board better color fastness, abrasion & scratch resistance.

**Chained reinforced fiber layer**  
 to provide better impact resistance.

**Elastic rubber layer.**  
 the flexible layer makes it much more sound-absorbing, and buffers surface and core materials.

**Reinforced structural core material.**  
 to provide stronger support.

**Reinforced hardness layer.**  
 to provide outstanding mechanical properties.

## ADVANTAGES OF WELLT TOUCH BOARD

-  Wood appearance
-  Easy installation
-  Waterproof
-  Slip-resistant
-  Insect-resistant
-  Free maintenance
-  Stain resistant
-  Barefoot friendly
-  UV resistant
-  Eco-friendly

A customized leisure private space to enjoy holidays is difficult to resist. The landscape design requires all elements harmonious.

## Build a sustainable world for future generation

By turning the waste to the best, we spend more time with families and less time worrying about limited resources. To build the world more sustainable, to leave future generations a better hope.

## SPLINTERS-FREE BAREFOOT FRIENDLY

The splinter-free Welltouch Borad surface makes it barefoot friendly. The rough wood grained surface enhances friction, making it slippery resistant.

\* Note: we strongly DON'T recommend to walk barefooted on the boards in extreme weather conditions.

### The best of the best

With its unrivalled quality, Welltouch Board saves you from worrying about maintenance work for years. Its stable properties prevent it from warping, bending, splitting and cracking.

### One-of-a-kind technology

By unique materials composition and production technology, Welltouch Board differentiates itself from competitors. They may look similar, but they are indeed different. With our strong R&D team, the technology keeps upgrading.

### Professionalism and experience

To choose Welltouch Board is an equivalent of choosing guaranteed professionalism. With more than 15 years experience in the industry, the goods & services we provide for our clients are always second to none.

## INVISIBLE FASTENING SOLUTION

The elastic inner structure bounces back to shrink the screw holes, making the board surface remain smooth after driving screws.

## NATURAL WOOD TEXTURE

Real wood

RSF Board

The remarkable resemblance of natural wood makes the Welltouch Board a better choice in consideration of wood element.

To reduce deforestation, to recycle wasted materials, to bring in latest technology, to make breathtaking product. We take care of the nature, we get return the same from the nature.

## Inspired by wood, better than wood

A serene outdoor living space is a harbor to save stressed souls. The elements blended in the nature should not contradict each other.

## New Material

### Lighter

The Board is made based on foaming technology, so it's lightweighted. This reduces cost on transportation and installation.

### Stronger

As the polyurethane foam is filled in the gaps, the polyurethane foam is foamed and filled in the gaps, solving the problem of low strength at the filling gaps and making the middle core material and the woven fiber reinforced layers a complete profile, which increases the overall strength of the Welltouch Board.

### Safer

The crust layer and the polyurethane elastic rubber layer of our products are both reinforced with chained fibers, so the overall mechanical properties of each product are more stable and excellent under the condition of the same density, and the safety coefficients of the products are better. Even if the crust layer is damaged or broken, the fiber-reinforced polyurethane elastic rubber layer can still provide enough mechanical support to ensure safety.
